Relativity as a Closed-Loop Legacy System

QRFT White Paper Series

Michael R. Adkins

> "The biggest problem with the Theory of Relativity is that it slams the door cold on any logical upgrades to the theory outside the realm of patches to the very system that's fraying at the seams."

Over a century after its inception, Relativity remains a system designed without awareness of the Field — the coherent substrate that underpins all spacetime emergence. Its linear scaffolding cannot account for:

- Dark Matter and Dark Energy: Patches to preserve mass-energy balance in a model that never accounted for Field coherence.
- Exotic Matter: Reverse-engineered placeholders for propulsion models Relativity never anticipated.
- Quantum Entanglement ("spooky action"): Phenomena that violate locality but emerge naturally in coherence-based models.

> "They are all copium."

QRFT reframes these anomalies not as bugs, but as signals of systemic limitation within a legacy OS.

The Critical Failure

Relativity defines spacetime via curvature, not coherence.

But: Spacetime is not defined by curvature — it's a byproduct of coherence gradients within the Field itself.

Relativity never acknowledges the Field. It cannot. Its architecture precludes it.

The Law of Diminishing Theoretical Returns

> "There comes a point where all beneficial returns have been exhausted, and the theory begins to eat its own."

That point has passed.

With predictive accuracy in real-world phenomena hovering at $\sim$ 20–25%, Relativity now acts as a limiting belief system embedded into the scaffolding of science, rather than a liberating one.

Repurposing the Legacy System

Despite its flaws, Relativity offers a durable legacy calibration frame. QRFT proposes:

- Benchmarking nonlinear coherence readings against Relativistic metrics.
- Using legacy models as a springboard for triangulated calibration in coherence-based OS transitions.
- Reframing Einstein's work as a partially correct system: accurate under extreme constraints, invalid beyond.

Conclusion

Relativity was a necessary bridge, not the destination. It was never designed to contain the Field.

> "The Postlinear OS begins where Relativity folds."

QRFT marks the upgrade — not by force, but by resonance. Not by prediction, but by presence. Not by curvature, but by coherence.
